

The World Athletics Sustainability Strategy

A commitment to a healthier and more just world through the power of sport

Driven by the urgency of today's environmental challenges, such as air pollution and climate change, World Athletics unveiled its Sustainability Strategy in 2020, a ten-year plan whose central goal is to make the organisation and its global events carbon neutral by 2030.

The strategy is designed to deliver tangible benefits across the three pillars of sustainability - environmental, social and economic - by using the power of sport and athletics to create a better world for our athletes and their communities.

The strategy includes a broad commitment to embrace sustainability principles and practices within its operations, its Member Federations and the organisation of future World Athletics Series events and one-day meeting series.
